

**Typology: conference**

An armchair with a rigorous aspect where the curved wooden backrest and under seat panel break the rigidity of the forms. The sinuosity of the backrest is ergonomic because it increases the comfort of the seat supporting the spectator during hours spent in the hall .

**Dimensions**

**Available finishes**

**Upholstery:** Fabric, Ecoleather, Leather

**Technical characteristics**

**Seat and Backrest**

SEAT: structural, in 15 mm thick multilayer beech wood with steel pivots for the seat's rotation and side support installation.

BACKREST: structural, in 13 mm multilayer beech wood.

**Padding:**

Seat and backrest are padded in flexible cold moulded polyurethane foam.

SEAT: self-extinguishing padding in polyurethane foam with density 40 Kg/m<sup>3</sup>.

BACKREST: self-extinguishing padding in polyurethane foam with density 40 Kg/m<sup>3</sup>.

**Sides:**

Inner structure in steel pipe with rectangular section of 40x80 mm and 2 mm thick, to be fixed to the floor by a folded metal sheet plate 5 mm thick. The floor bracket is covered with a folded metal sheet frame, painted with epoxy powder in black finish. The metal structure is covered with wooden 8 mm thick boxes where the rotation mechanisms and the devices to fix the backrest are mounted.

**Armrests:**

In multilayer wood of thickness 30 mm. Padding in self-extinguishing polyurethane foam to be upholstered in leather or fabric.

### Mechanisms
